

## Finding the Equivalent R/3 Values for CUFS Values

---

The “Display Legacy Mapping” transaction in R/3 allows a Health System user to enter the old CUFS fund code and object code and find the equivalent R/3 value that has now replaced the CUFS values.

*Note: Only Health System companies should map CUFS fund codes to new R/3 values. Company 0010 uses the same seven digits as the CUFS fund codes.*

**If you have a CUFS fund code and an object code, and you’re trying to find the R/3 equivalent, follow these steps.**

1. Enter **ZFMP** in the Command code field on the initial *SAP R/3* system screen.
2. Click on the  **Continue** button to display the *Display Legacy Mapping: Z\_CUFS\_TO\_R3* screen (shown below).

3. Enter the **fund code** in the **Legacy Fund** field.
4. Enter the **object code** in the **Legacy Object** field as seen below.
5. Click on the  **Execute** button to display the next *Display Legacy Mapping: Z\_CUFS\_TO\_R3* screen (shown below).

## Finding the Equivalent R/3 Values for CUFS Values (cont.)

6. Review the **Inputs** section (the CUFS values entered on the first screen).
7. Review the **Outputs** section (the equivalent R/3 values), as follows:
  - **Company Code** = identifies the company code.
  - **Type** = indicates if the R/3 value is a cost center (CC), a profit center (PC), or a WBS element (WBS).
  - **R3Value** = the 9 digit R/3 value for the cost center, profit center, or WBS element. This number replaces the seven digit CUFS fund code.
  - **G/L account** = the 6 digit number for expenses or revenues that is the equivalent of the CUFS object code.

*Note:* Not all CUFS fund codes map one-to-one to R/3 values.
